Editions and licensing

Three editions on one console and one G8 engine. Community manages the gateway configuration of one Environment with no license fee. Enterprise editions are licensed by gateway node and node type, with a signed license file checked locally; there is no public price list and no hosted version.

FEATURES BY AREA	COMMUNITY	ENTERPRISE	ENTERPRISE AI
Routes, Services, Upstreams, Consumers, Certificates; every Plugin as a form or raw JSON	✓	✓	✓
Rate limiting, caching, transformation, canary splits, circuit breakers, validation	✓	✓	✓
LLM providers with fallback, token limits, prompt rules, caching, OpenAPI to MCP	✓	✓	✓
API keys, JWT, OpenID Connect, LDAP, SAML, access rules, masking, mTLS, secret managers	✓	✓	✓

Copy configuration between Environments	—	✓	✓
Roles mapped to Active Directory groups; audit log of every change; CI/CD tokens	—	✓	✓
G8 Copilot: manage the gateway in conversation	—	—	✓
Engineering support in Turkish and English; help with installation and upgrades	—	✓	✓

How licenses are counted

A gateway node is one running instance of the G8 engine that carries traffic. A node type is production or non-production; the two are counted separately, and the nodes that run the console and its database do not count. Community is free, obtained from the G8 team; Enterprise is a signed license file installed in the console, and moving to it keeps the configuration. Licenses and invoices are issued by Digital Cosmonot Bilişim Danışmanlık Eğitim Ltd. Şti.

The G8 Copilot

In Enterprise AI, the Copilot answers questions about the gateway in plain language and makes changes for you: it acts with the permissions of the person asking, shows what it will change and waits for a yes, and every change passes the G8 engine and the audit log under that person's name.

WHAT WE ASK TO PREPARE A QUOTE

Your Environments, where you install G8, the production and non-production gateway nodes of each and the edition, to hello@g8.dev or g8.dev/request-a-demo?need=quote.
